WHAT IS COPYRIGHT?

Copyright is a bundle of five rights.

Authors may retain some, or all, of this bundle of five exclusive rights when publishing:

• To reproduce your work
• To prepare derivatives (e.g. translations or expanded versions) of your work
• To distribute your work
• To display your work publicly
• To perform your work publicly

Copyright also includes the right to authorize others to perform these actions.

RETAINING RIGHTS AS AN AUTHOR

Many authors wish to retain rights:

To reuse their work in teaching, future publications (including theses)

To share their work, including through websites, subject-based preprint servers, or university faculty research collections like MIT’s DSpace

To give the right to others to use their work, if they wish

To comply with funder requirements, such as those of NIH or HHMI

Publisher copyright agreements do not necessarily allow the author to retain all these rights.

TRANSFER OF COPYRIGHT

Publisher’s Agreements

The creator of a work owns the copyright as soon as the work is fixed in a tangible form – for example, when it is saved on a hard drive.

The publisher needs a written agreement in order to publish or distribute a work.

The agreement commonly transfers copyright to the publisher, and may give some rights back to the creator.

If you wish to have rights to your work post-publication, you need to be sure those rights are specified in any agreement you sign, or that the article falls under a special MIT agreement (see p.2).

To alter the publisher’s agreement:

• Edit to reflect the rights you want. OR
• Attach the MIT Amendment. This one-page legal document adds author rights to a standard copyright agreement

Download the MIT amendment from:
http://libraries.mit.edu/copyright-amend

The MIT amendment has been legally vetted and specifically created for MIT authors who want to retain rights.
SPECIAL AGREEMENTS FOR MIT AUTHORS

MIT Faculty Open Access Policy

Passed unanimously by the MIT faculty on 3/18/09, the Policy gives MIT permission to share faculty-authored scholarly articles openly on the web, and allows authors to reuse these works. The Policy applies to all faculty-authored articles, including articles co-authored by graduate students and faculty authors.

Manuscripts of articles may be submitted under the Policy at: http://libraries.mit.edu/oasubmit.

Articles will then appear in MIT’s open-access research repository, DSpace@MIT.

For more information: http://libraries.mit.edu/oapolicy

Special Author Rights for Springer Articles

A special agreement between MIT and the publisher Springer extends broad reuse and posting rights to MIT authors.

The author’s manuscript may be deposited in any repository, and the author may use articles for any scholarly or educational purposes, including theses.

Please submit author manuscripts of articles to http://libraries.mit.edu/oasubmit.

Articles will then appear in MIT’s open-access research repository, DSpace@MIT.

Special Author Rights for Major Publishers: use figures without permission

Contracts signed by the MIT Libraries make it easier for MIT authors to use figures, illustrations, or tables from major publishers in new scholarly publications, including theses.

MIT authors can use figures, illustrations, or tables from journals published by Elsevier, Springer, Taylor & Francis or Wiley, without asking any permission or paying any fee.

See: http://libraries.mit.edu/usingfigures.

FAIR USE

Reuse of Figures, Images, and Other Content in Theses

If you want to reuse a figure, table, image, or other content in your thesis, you may not need permission from the copyright holder. In addition to the special contract terms described above, fair use may apply.

US copyright law’s fair use exemption allows authors to use portions of a copyrighted work under certain circumstances without obtaining permission. To determine whether or not a proposed reuse qualifies for this fair use exemption, there are four factors to consider:

For a review of the factors, see:

PUBLISHER POLICIES

Theses and Article Publishing

Publisher policies vary regarding graduate students’ rights to reuse their previously published articles in their theses. Policies on accepting journal submissions that first appeared in an author’s previously released thesis also vary.

To review publisher policies on these issues see:
