JRK  
on  
Bohr

To Members of the Faculty and Staff:

Professor Niels Bohr of the Institute of Theoretical Physics in Copenhagen is now in Cambridge and will remain in residence until the end of November as Karl Taylor Compton Lecturer. We are very fortunate to have Professor Bohr at M.I.T., and his lectures will do honor to the memory of Karl Compton.

These lectures are expected to be one of Professor Bohr's major works and of great significance. His topic will be "Quantum Physics and the Notion of Complementarity" and will deal with the main features of the development of atomic physics and its implications in other fields of human knowledge.

The first lecture will be given at Kresge Auditorium at 8 p.m. on Tuesday night, November 5. Other lectures will be presented on November 7, 14, 19, 21, and 26. Tickets will not be necessary for admission.

This major work has been designed by Professor Bohr for presentation to as large and diversified an audience as possible. All members of the Institute community and interested visitors are most cordially invited to the lectures.

We are very fortunate to have Professor Bohr among us and to have this opportunity to hear one of the greatest scientists of our generation.

J. R. Killian, Jr.  
President
